

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (CurrentlyAmended) A method of rendering an object from a text and numeric centric line of business application to a graphical user interface centric content manager client application said text and numeric centric line of business application resident on a a resource manager, said resource manager including

- (i) an HTTP server,
- (ii) a store object agent,
- (iii) a resource manager tracking table data base, and
- (iv) a file system;

said method comprising:

- a. requesting the object from a text and numeric centric line of business application;
- b. the line of business application initiating an associated host initiated display application program interface, and calling a workstation listener;
- c. a content manager host sending customer application request to a workstation listener;
- d. the workstation listener launching an associated content manager graphical user interface client;
- e. the content manager graphical user interface client building a request for the object and sending the request to the associated content manager application for the associated host initiated display; and

- f. the content manager application responding to the graphical user interface centric content manager client and rendering the object from the text and numeric centric line of business application to the graphical user interface centric user.
2. (Previously Amended) The method of claim 1 wherein the requested object is selected from a group consisting of displays, prints, and folder contents.
3. (Currently Amended) A computer system comprising:
- (1) a graphical user interface centric content manager client application,
 - (2) a resource manager, said resource manager including
 - (i) an HTTP server,
 - (ii) a store object agent,
 - (iii) a resource manager tracking table data base, and
 - (iv) a file system,
 - (3) a library server and
 - (4) a text and numeric centric line of business application, and
 - (5) a host initiated display application program interface between the line of business application and the graphical user interface centric content manager client application.
4. (Previously Amended) The computer system of claim 3 adapted to render an object from a text and numeric centric line of business application to a graphical user interface centric client application by the steps of:
- a. requesting the object from the text and numeric centric line of business application;
 - b. the text and numeric centric line of business application initiating an associated host initiated display application program interface, and calling a workstation listener;

- c. a content manager host sending a customer application request to a workstation listener;
 - d. the workstation listener launching an associated content manager graphical user interface client;
 - e. the content manager graphical user interface client building a request for the object and sending the request to the content manager application for the associated host initiated display; and
 - f. the content manager application responding to the graphical user interface centric content manager client and rendering the object from the text and numeric centric line of business application to the graphical user interface centric user.
5. (Previously Amended) The computer system of claim 4 wherein the requested object is selected from a group consisting of displays, prints, and folder contents.
6. (Currently Amended) A program product comprising a substrate with computer readable code for use with a computer system, said computer system comprising:
- (1) a graphical user interface centric content manager client application,
 - (2) a resource manager, said resource manager including
 - (i) _____ an HTTP server,
 - (ii) _____ a store object agent,
 - (iii) _____ a resource manager tracking table data base, and
 - (iv) _____ a file system,
 - (3) a library server and
 - (4) a text and numeric centric line of business application, and
 - (5) a host initiated display application program interface between the line of business application and the graphical user interface centric content manager client application,
- said computer readable program code adapted to configure and control a computer to

render an object from a text and numeric centric line of business application to a graphical user interface centric content manager client application by the steps of:

- a. requesting the object from a text and numeric centric line of business application;
 - b. the line of business application initiating an associated host initiated display application program interface, and calling a workstation listener;
 - c. a content manager host sending a customer application request to a workstation listener;
 - d. the workstation listener launching the content manager graphical user interface client;
 - e. the content manager graphical user interface client building a request for the object and sending the request to the associated content manager application for the associated host initiated display; and
 - f. the content manager application responding to the graphical user interface centric content manager client and rendering the object from the text and numeric centric line of business application to the graphical user interface centric user.
7. (Previously Amended) The program product of claim 6 wherein the requested object is selected from a group consisting of displays, prints, and folder contents.
